1) REMOVE DOORS

Remove the upper and lower door hinge nuts.

Disconnect your door strap, roll down the window, grasp the door firmly and lift straight up. You may need to work the door back and forth as you lift.

2) REMOVE OEM DOOR BUSHINGS

Use the included Door Bushing Removal Tool and a hammer to carefully tap out your OEM door bushings. Use the tool on the bottom of the hinge as shown here.

NOTE: Jeeps equipped with hinges with a machined "step" inside the hinge (1994 to 1999) will require a punch or flathead screwdriver to remove the OEM bushing.

You may want to use a piece of cardboard or a shop rag to protect the side of your Jeep from errant hammer swings. If the OEM door bushings are stubborn, you may

want to soak them in a penetrating lubricant.

NOTE: Installing hinge liners on 1994 to 1999 models will require trimming. Line up the hinge liner with the included tool as show in the picture below and cut at the top line using a utility knife.

4) REINSTALL YOUR DOOR

Slide your door back onto the hinges and reinstall your door nuts.

5) REPEAT THIS PROCESS ON THE OPPOSITE DOOR.

6) ENJOY YOUR NEW KENTROL DOOR HINGE LINERS!

3) INSTALL KENTROL DOOR HINGE LINERS

If necessary, lightly sand the inside of the hinge until it is smooth. Slide the hinge liners into the hinges by hand. **DO NOT USE A HAMMER OR THE REMOVAL TOOL**, as it may break the liners. It may be necessary to use a drill bit or other means to clean out the corrosion left by the factory hinges. Using a small amount of grease can also help.

If the liners do not install easily, please check that you have OE hinges. Some aftermarket hinges look very similar to OE hinges.
